Profile

Computer Science Engineering student specializing in Python Full-Stack Development, Cloud Computing, and DevOps. Experienced in designing cloud-native applications using Docker, Kubernetes, FastAPI, Django, React, and CI/CD pipelines through academic projects and virtual internships.

Education

CMR College of Engineering and Technology

2023 – 2027

Bachelor of Technology in Computer Science Engineering

CGPA: 8.5

Technical Skills

Languages: Python, C, C++, JavaScript, HTML, CSS

Frameworks & Libraries: FastAPI, Django, Django REST Framework (DRF), React.js, SQLAlchemy ORM

Databases: PostgreSQL, MySQL, SQLite, Redis

Cloud & DevOps: Google Cloud Platform (GCP), Docker, Docker Compose, Kubernetes, Helm Charts, GitHub Actions (CI/CD), Google Artifact Registry, Database Migrations

Tools: Git, GitHub, VS Code, Anaconda, Windows, Excel

Data Analytics: Power BI, Power Query, Microsoft Fabric, OneLake, Pandas, NumPy, Seaborn, Matplotlib

AI Tools: Cursor AI, Claude Code (Kimchi), Prompt Engineering, AI-assisted Debugging

Experience

Infosys

June 2026 – July 2026

Python Developer Intern (Virtual)

- Developed scalable full-stack web applications using Python web frameworks and modern frontend libraries.
- Built REST APIs, integrated external data streams, and implemented JWT authentication.
- Designed scalable modules for real-time tracking, port analytics, and automated safety alerts.

Microsoft Elevate

March 2026 – April 2026

Power BI Intern (Virtual)

- Performed data analysis, visualization, and business reporting using Power BI.
- Built end-to-end data pipelines using Power Query for preprocessing and transformation.
- Explored enterprise cloud analytics architectures and cloud-based workflows.

Projects

Cloud-Native Task Tracker on GCP | *FastAPI, React, PostgreSQL, Redis, Docker, GCP*

June 2026 – July 2026

- Built a cloud-native Task Tracker application using FastAPI, React, PostgreSQL, and Redis.
- Implemented Redis caching with TTL-based invalidation and containerized services using Docker.
- Automated CI/CD deployments using GitHub Actions, Helm, and Google Artifact Registry.
- Live Demo: <https://taskmonitor.org>
- GitHub: [Project Link](#)

Maritime Vessel Tracking & Safety Platform | *Django, React.js*

Dec 2025 – Feb 2026

- Created a full-stack web application for real-time ship tracking and port analytics.
- Designed relational database models for storing over 1000 ship, port, and trip records.
- Integrated live weather and shipping APIs for accurate vessel visualization.
- GitHub: [Project Link](#)

Stock Price Prediction Using Machine Learning | *Python, Machine Learning*

Jan 2025 – Apr 2025

- Developed a machine learning model to predict stock prices using historical market data.
- Evaluated Linear Regression, Random Forest, and LSTM models using MAE and R².
- GitHub: [Project Link](#)
