EDUCATION

(2023–2027)

CMR COLLEGE OF ENGINEERING AND TECHNOLOGY

- Bachelor of Technology
- Computer Science Engineering
- CGPA: 8.5
- Hyderabad, Telangana

SKILLS

Languages

Python, C, C++, JavaScript, HTML, CSS

Frameworks & Libraries

FastAPI, Django, Django REST Framework (DRF), React.js, SQLAlchemy ORM

Databases

PostgreSQL, MySQL, SQLite, Redis

Cloud & DevOps

- Google Cloud Platform (GCP)
- Docker, Docker Compose
- Kubernetes (Deployments, Services, ConfigMaps, Secrets, Load Balancers)
- Helm Charts
- GitHub Actions (CI/CD)
- Google Artifact Registry (Docker Images)
- Database Migrations

Tools & Platforms

Git, GitHub, VS Code, Anaconda, Windows, Excel

AI-Assisted Development

- Cursor AI
- Claude Code (Kimchi)
- AI-assisted software development
- AI-powered debugging and code review
- Prompt engineering for software development

Data Science & Analytics

Power BI, Power Query, Microsoft Fabric, OneLake, Pandas, NumPy, Seaborn, Matplotlib.

PROFILE

Computer Science Engineering student specializing in Python full-stack development, cloud-native architectures, and DevOps. Experienced in designing, building, and deploying scalable cloud-native applications with containerization, Kubernetes, and CI/CD automation through academic projects and virtual internships.

EXPERIENCE

(Dec 2025 – Mar 2026)

Python Developer Intern (Virtual) – Infosys

- Developed scalable full-stack web applications using Python web frameworks and modern frontend libraries.
- Built robust REST APIs, integrated external data streams, and implemented secure JWT user authentication.
- Designed scalable application modules for real-time tracking, port analytics, and automated safety alerts.

(Mar 2026 – Apr 2026)

Power BI Intern (Virtual) – Microsoft Elevate

- Performed data analysis, structural transformations, and advanced visualizations to support business decision-making.
- Utilized Power Query to build end-to-end data pipelines, covering data cleaning and preprocessing stages.
- Explored cloud analytics architectures and enterprise data workflows within cloud ecosystem environments.

PROJECTS

(June 2026 – July 2026)

Cloud-Native Task Tracker on GCP

- Built a cloud-native Task Tracker application using FastAPI, React, PostgreSQL, and Redis.
- Implemented Redis caching with TTL-based invalidation, containerized services using Docker, and automated CI/CD deployments with GitHub Actions.
- Automated build, deployment, and database migration workflows using GitHub Actions, Helm, and Google Artifact Registry on GCP.

Live Demo: <https://taskmonitor.org>

(Dec 2025 – Feb 2026)

Maritime Vessel Tracking & Safety Platform

- Created a full-stack web application for real-time ship tracking and port analytics using Django and React.js.
- Designed relational database models to securely store and organize 1000+ ship, port, and trip records.
- Connected live weather and shipping APIs to a map interface for accurate visual tracking.

(Jan 2025 – Apr 2025)

Stock Price Prediction Using Machine Learning

- Built an ML system to predict stock market prices using historical data trends.
- Trained and evaluated Linear Regression, Random Forest, and LSTM models using MAE and R² scores.
